INTRODUCTION

The latest Documentation was generated on: Sep 03, 2019

1.1 Installation

- MSnPy requires Python 3.7.+.
- MSnPy is published under GNU General Public License v3.0.

Get the latest version via github

<https://github.com/computational-metabolomics/msnpy>

or the latest package at pypi or conda

<https://pypi.python.org/pypi/msnpy>

<https://anaconda.org/bioconda/msnpy>

1.2 Developers & Contact Information

Developers:

Ralf J. M. Weber - r.j.weber@bham.ac.uk

Thomas Lawson - t.n.lawson@bham.ac.uk

Contact information:

Ralf J. M. Weber

Phenome Centre Birmingham

School of Biosciences, University of Birmingham

Edgbaston, Birmingham, B15 2TT, U.K.

Tel: +44(0)121 414 3388

Email: r.j.weber@bham.ac.uk

MSNPY PACKAGE

2.1 Subpackages

2.2 Submodules

2.3 msnpy.msnpy module

2.4 msnpy.processing module

`msnpy.processing.assign_precursor` (*peaklist: dimspy.models.peaklist.PeakList, header_frag: str, tolerance: float = 0.5*)

Parameters

- **peaklist** –
- **header_frag** –
- **tolerance** –

Returns

Return type

`msnpy.processing.create_graphs_from_scan_ids` (*scan_dependents: list, scan_events: dict, ion_injection_times: dict*)

Create Directed Graph from scan dependent relationships

Parameters

- **scan_dependents** –
- **scan_events** –
- **ion_injection_times** –

Returns

Return type

`msnpy.processing.create_spectral_trees` (*trees: Sequence[networkx.classes.ordered.OrderedDiGraph], peaklists: Sequence[dimspy.models.peaklist.PeakList]*)

Parameters

- **trees** – list of NetworkX graphs
- **peaklists** – list of PeakList objects

Returns**Return type** Sequence[nx.OrderedDiGraph]`msnpy.processing.create_templates` (*graphs: list, nh: int*)

Create a ‘master’ graph that include all the experimental trees Loop through all the subgraphs/graphs

Parameters

- **graphs** –
- **nh** –

Returns**Return type**`msnpy.processing.group_by_template` (*graphs: list, templates: list*)**Parameters**

- **graphs** –
- **templates** –

Returns**Return type**`msnpy.processing.group_scans` (*filename: str, nh: int = 2, min_replicates: int = 1, report: str = None, max_injection_time: float = None, merge_ms1: bool = False, split: bool = False, remove: bool = True*)**Parameters**

- **filename** –
- **nh** –
- **min_replicates** –
- **report** –
- **max_injection_time** –
- **merge_ms1** –
- **split** –
- **remove** –

Returns`msnpy.processing.hdf5_peaklists_to_txt` (*filename: str, path_out: str, delimiter: str = '\t'*)**Parameters**

- **filename** –
- **path_out** –
- **delimiter** –

`msnpy.processing.merge_ms1_scans` (*graphs: list*)**Parameters** **graphs** –**Returns****Return type**

`msnpy.processing.mz_tolerance` (*mz: float, tol: float, unit: str = 'ppm'*)

Parameters

- **mz** – mz value
- **tol** – tolerance
- **unit** – ppm or da

Returns

Return type float

`msnpy.processing.process_scans` (*filename: str, groups: list, function_noise: str, snr_thres: float, ppm: float, min_fraction: float = None, rsd_thres: float = None, normalise: bool = False, ringing_thres: float = None, exclusion_list: dict = {}, report: str = None, block_size: int = 5000, ncpus: int = None*)

Parameters

- **filename** –
- **groups** –
- **function_noise** –
- **snr_thres** –
- **ppm** –
- **min_fraction** –
- **rsd_thres** –
- **normalise** –
- **ringing_thres** –
- **exclusion_list** –
- **report** –
- **block_size** – number of peaks in each clustering block.
- **ncpus** – number of CPUs for parallel clustering. Default = None, indicating using as many as possible

Returns List of (average) PeakList objects (DIMSPy)

Return type Sequence[PeakList]

2.5 Module contents

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`

PYTHON MODULE INDEX
